        arr[j] = arr[j+1];
        arr[j+1] = temp;
    }
}

```

$\rightarrow O(n^2)$

Recursion

A function calling itself directly/indirectly.

Direct	Indirect
<pre> void fun() { Base Condition fun(); } </pre>	<pre> void A() { B(); } void B() { A(); } </pre>

Base Case / Terminating Condition

Example To print descending
Print \rightarrow 5 4
fun(5) 5 4 3 2 1

```
void fun (int n)  
{  
  A if (n == 0) return;  
  B S.O.P (n);  
  C fun(n-1);  
}
```

Base

Call By Value

A(int x)

{

}

main()

{ int y = 5;

 A(y);

∴ Call by Value

Copy of reference

A(Student S1)

{

 S1.name = "Sam";

 S1 = null;

}

```

    }
    main ( )
{
    Student s = new Student("Ram");
    A(s);
}
    s.name

```

Java Supports Only Call by Value

Binary Search

(10)

$l = 5$
 $r = 4$

$\frac{3}{8}$

$l \leq r$ ✓

n

$n/2$

$n/4$

$n/8$

Assume
2 steps

→

Check

$$\boxed{1}$$

$$\frac{n}{2^k} \quad \text{or } \frac{n}{2^k}$$

for every step $O(1)$

$$\rightarrow O(k)$$

for worst case \Rightarrow

$$\frac{n}{2^k} = 1$$

$$2^k = n$$

$$\log(2^k) = \log(n)$$

$$k \log 2 = \log n$$

$$k = \frac{\log n}{\log 2} \left(\frac{\log A}{\log B} \rightarrow \log_B A \right)$$

$$k = \log_2 n$$

$$\underline{\underline{T.C}} = O(k) = O(\log_2 n)$$
